

Yummy Honey

Did you know that bees have a sweet tooth just like us? Bees make honey from flower nectar to use as food in the winter. Bees take the nectar back to their hive where they fan it with their wings. This fanning causes the nectar to dry, which turns it into honey. Bees visit up to 2,500 flowers a day and need two million flowers to produce one pound of honey.

Have you ever tasted honey? What foods do you like to eat with honey?

Nectar

Nectar is a sweet juice that a flower makes. It is hidden inside the flower and the bee uses its large straw-like tongue to suck it up.
